	/Bao-Thuy L.	Nguyen/		
	Primary Exam April 17, 2008	niner, Art Uni	t 1641	

Continuation of 11. does NOT place the application in condition for allowance because: for the reasons stated in the previous office action dated 31 Decmeber 2007.

Applicant argues that one having ordinary skill would not substitute the nanoshells of West with COINs taught by Schultz because West teaches away from using COINs because of "the need in the biomedical field for better, more sensitive devices and methods for performing in vivo sensing of chemical or biological analytes". Applicant's argument is not persuasive because Schultz et al. teach the particles of the invention providing increased Raman signal enhancement, which is the same detection used in West. Therefore the particles of Schultz would provide increased signal enhancement in the matrix of West. Furthermore, West et al. do not teach that the use of COINs taught by Schultz render the matrix of West inoperable or that the use of signal enhancing particles would be disadvantageous.

Applicant further argues that Schultz relates to separation of PRP's and therefore the PRP's of Schultz are mobile and not stationary within the electrophoresis gel of Schultz. However, applicant's argument is not persuasive because Schultz is not relied upon for teaching stationary particles and is instead relied upon only for the types of particles used. As outlined in the rejection, West et al. teach stationary particles within a matrix.
